WASTE MINIMIZATION

Chaparral Steel Midlothian, LP (Chaparral) operates three rolling mills to produce bar and structural products from steel scrap at its Midlothian, Texas steel mill. Baghouses collect the electric arc furnace (EAF) fumes and dust (EPA Hazardous Waste Code K061). All (100%) of the dust produced in 2010 was either shipped off-site for recovery and reuse of zinc, lead, and cadmium or was recycled in Chaparral's EAF furnaces. Chaparral actively pursues beneficial uses for all waste generated at the facility. This is reflected in the fact that 100% of the baghouse dust produced in 2010 was recycled for beneficial metals recovery. While the

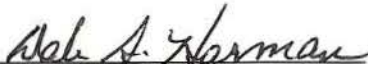

nature of the EAF steel making process prevents any significant reduction in the amount of dust produced, Chaparral has and will continue to minimize the environmental impacts of the dust by arranging for recovery and reuse of its beneficial metal content.
